Details: Amid the slowdown in manufacturing being experienced in the United States, Accura Technics is managing to make sales of their specialty machine tools. In 2008, an added emphasis on sales was made, and the response to that effort is carrying over into 2009. President Patrick Hurst states: "This latest order for our flagship product shows how our recent sales efforts across the entire manufacturing sector are continuing to bear fruit."

The product ordered is Accura's flagship CNC grinding machine, Model 1210G, which was configured by Accura as a universal bore and tapered seat grinder. With its hydrostatic work table, natural granite base, high performance CNC control, and linear motor axis drives, Accura's 1210G is well suited for this demanding application.

For more information on the company's line of CNC extreme precision and production machine tools visit www accuratetechnics.com
